About me

I'm a fullstack developer who builds and ships software end to end, from the frontend to the backend. In my most recent role, most of my work has been on the AI side, voice agents and chat assistants backed by RAG pipelines. I work in both TypeScript and Python, and I like learning new tools.

Before I worked in tech, I spent years in hospitality. I came up through restaurants and bars, was given more responsibility and grew into the role until I was running a large part of a chain and training staff in customer service, stress management, and communication. I also started my own bar. It's where I learned most of what I know about people. I'm sociable, full of energy for the people I work with, and never far from a laugh. I know how much people gain from open communication and being able to have fun together.

Work experience

2026 · GOTHENBURG, SWEDEN

Fullstack Developer, LeadCaller (Communication One i Göteborg AB)

- Delivered customer-facing features end to end on a live SaaS product, from the React/Remix UI down to serverless AWS (Lambda, DynamoDB, API Gateway), used daily by the sales team and customers.
- Built a voice agent integrated with Twilio, using Deepgram for speech-to-text, OpenAI for reasoning, and ElevenLabs for natural speech.
- Paired that with a RAG chat assistant that answers from each customer's own data, using embeddings and vector search (Qdrant, Pinecone) to keep answers grounded rather than guessed at.
- Shipped dashboards with live statistics that became the team's analysis and sales tool, built in React/Remix and updated live over WebSockets.
- Integrated Stripe payments (checkout and webhooks) and built an engine that sends customer email and SMS automatically, running serverless on AWS across PostgreSQL and DynamoDB.
- Onboarded new customers, owned QA, and debugged production issues on a live system.

2025 · GOTHENBURG, SWEDEN

Internship, AI Sweden

- Created an internal tool that pulled project reports from Neo4j and SQL, summarized them with Gemini, and wrote the summaries back, so the team could see where each project stood at a glance instead of reading full reports.
- Designed and built the interface: view, edit and manage all project reports in one place.

2024 · GOTHENBURG, SWEDEN

Internship, Algineer

- Built teaching animations in Manim (Bézier curves, motion design) in my first professional dev team, working with Git and an agile workflow.

Skills

PROGRAMMING LANGUAGES

TypeScript · JavaScript · Python · SQL · C#

FRONTEND

React · Remix · Tailwind CSS · Recharts · real-time UI (WebSockets)

BACKEND & CLOUD

Node.js · AWS serverless (Lambda, DynamoDB, API Gateway, S3) · IaC (SST / CDK) · PostgreSQL · Stripe · web crawling/scraping

AI & DATA

RAG (embeddings + vector search) · Qdrant · Pinecone · LLM apps (OpenAI, Claude, Gemini) · MCP servers · real-time voice (Twilio, Deepgram, ElevenLabs) · Neo4j

TOOLING

Git · Agile · QA

ALSO WORKED WITH

React Native · Sanity CMS

Education

2023–2025 · GOTHENBURG

Object-Oriented Programming with a focus on AI

Higher Vocational Education diploma, 400 HVE credits · NBI Handelsakademin

Languages

Swedish, native
English, fluent
