Work experience

📅 2026 · 📍 GOTHENBURG, SWEDEN

Fullstack Developer, LeadCaller (Communication One i Göteborg AB)

- Shipped features across a live SaaS product, from frontend to serverless AWS backend.
- Built a real-time voice agent and a chat assistant backed by a RAG pipeline, so answers stayed grounded in the customer's own data.
- Built live dashboards in React and Remix, connected straight to our database, showing sales, forecasts and performance in real time for the sales team and customers.
- Integrated Stripe payments and built an automation engine for email and SMS on a serverless AWS backend, working with both NoSQL and SQL databases.
- Onboarded customers, owned QA, and handled production issues as they came up.
- Worked day to day in TypeScript, React/Remix and Node, with AI tools as a natural part of the workflow.

📅 2025 · 📍 GOTHENBURG, SWEDEN

Internship, AI Sweden

- Built a tool that connected to both Neo4j and SQL, used Gemini to summarize detailed project reports, and wrote the generated summaries back into the databases. Gave a faster overview of where each project stood.
- Built the GUI for it from scratch, where you could view, edit and update the project reports.

📅 2024 · 📍 GOTHENBURG, SWEDEN

Internship, Algineer

- Built teaching animations with Manim, working with Bézier curves and design, in my first real dev team using Git and agile workflow.

Background

Before tech I spent many years in hospitality, including running my own bar and working in leadership roles. It gave me a foundation that still shows in how I work: staying calm when things get busy, being comfortable with people, and caring about the business behind the work. I led and trained staff in stress management and customer service, and was part of turning operations around for the better.

Skills

TypeScript

Python

React / Remix

Node.js

AWS (SST / CDK)

SQL / PostgreSQL

RAG / LLM

Claude / OpenAI

C#

Git

Profile

Fullstack developer, comfortable working anywhere in the stack, from frontend and backend to infrastructure. I switched into tech from a different career, and I like learning new tools and working closely with a team that solves problems together. What I like most is digging into a problem and figuring out how to solve it.

Education

📅 2023–2025 · 📍 GOTHENBURG

Object-Oriented Programming with a focus on AI

Higher Vocational Education diploma, 400 HVE credits · NBI Handelsakademin
